Feature Showcase for Markdown PDF CLI

This sample showcases all supported formatting, diagrams, and math features converted using the standalone CLI.

Overview Matrix

Category	Syntax / Engine	Supported
Mermaid Diagrams	```mermaid code blocks (flowchart, sequence, class, gitGraph, state)	Yes
KaTeX Mathematics	Inline, block, brackets `\(...\)` / `\[...\]`, and ```math fence	Yes
PlantUML Diagrams	Both `@startuml` blocks and ```plantuml code fences	Yes
Syntax Highlighting	Highlight.js for TypeScript, Python, JSON, HTML, Bash	Yes
Task Lists	Checkboxes `- [x]` and `- [ ]`	Yes
Emojis	Shortcodes like `:smile:`, `:tada:`, `:rocket:`	Yes
Callout Containers	Container plugin `::: warning` and `::: tip`	Yes
Markdown Includes	`:[Include Title](relative-path.md)`	Yes

Task List & Emojis

- [x] Core Conversion Engine 🎉
- [x] Puppeteer PDF & Image Exporter 🚀
- [ ] Explore custom style options 😄

Containers

Tip: You can convert this file into PDF, HTML, PNG, and JPEG in a single command:
`npx markdown-pdf --type all sample/feature-showcase.md`

Warning: Always ensure valid syntax inside Mermaid and PlantUML blocks to avoid rendering issues.

KaTeX Math

Inline: $E = mc^2$ and $e^{i\pi} + 1 = 0$.

Block display:

$$\int_{-\infty}^{\infty} e^{-x^2}\,dx = \sqrt{\pi}$$

LaTeX brackets display:

$$\sum_{k=1}^{n} k^3 = \left(\frac{n(n+1)}{2}\right)^2$$

Fenced math code block:

$$\mathbf{X} = \begin{pmatrix} x_{11} & x_{12} \\ x_{21} & x_{22} \end{pmatrix}$$

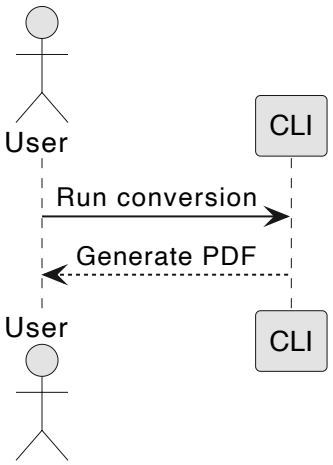

Syntax Highlighting

```typescript
export function convertMarkdown(text: string): string {
  console.log("Converting markdown with syntax highlighting");
  return text.trim();
}
```

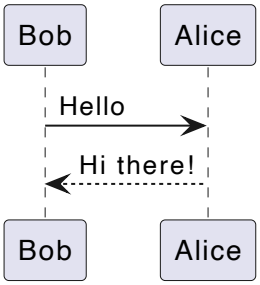

```python
def generate_report(items: list[str]) -> None:
    for idx, item in enumerate(items, 1):
        print(f"{idx}: {item}")
```
